

## Class 1 Home Learning

### A journey through Space

Please choose one home learning option and upload to Team's by Monday 30<sup>th</sup> November

#### Planet fact finders!

Choose a planet to focus on and research to find out lots of facts about it!

You can present your planet and facts in any way you would like. You could draw a picture of your planet with your facts around the edge or create something more spherical in nature!

#### Build your own space rocket!

Make it any shape and size you would like!

When you have built the rocket you can discuss the different shapes on the rocket. Does it have a circular window, rectangular door, square button? Etc.

You could also discuss how tall the rocket is compared to other things in the home, putting the items into order from tallest to shortest to compare.

#### Exploring space from Earth!

Go outside when it is dark and explore space from Earth!

You can count how many stars you can see in the sky, look to see if they are all the same and have a look if you can find the moon too!

Does the night sky change? Go out on a different night and see if you can spot any similarities and differences!

Ask your grown-up to help you to write about what you saw!
